ON THE COVER

Cover: Brightly colored paleosols exposed along the rim of the Honeycomb Buttes in the Green River Basin, Wyoming (USA). These paleosols preserve a detailed record of terrestrial conditions during the early Eocene climatic optimum (EECO), including global changes in atmospheric $p\text{CO}_2$, temperature, and precipitation. See “Constraining the early Eocene climatic optimum: A terrestrial inter-hemispheric comparison” by Hyland et al., p. 244–252.
